

**How Offices Protect
Sensitive Conversations.**

— Then vs Now —

ft. The Biamp Sound Masking System.

Then

Enclosed spaces or ambient sounds for speech privacy across the workplace.

Airflow-like sound masking that keeps conversations unintelligible and blends into the environment.

Now

Then

Privacy is lost when power shuts down or ambient music stops.

Built-in backup power ensures the sound masking continues without interruption.

Now

Then

Limited scalability and zonal control over speech privacy.

Networked platform with scalable deployment, zone-based tuning, and scheduling options.

Now

Protect conversations with audio solutions tuned to your voice.

Experience the
Biamp Sound Masking System
live at the Beyonders Centre.
