

RadReview Instructor: Assigning the Mock Test

RadReview has released a full-length 200-question ARRT radiography mock test for instructors to assign. This mock test is mapped to the latest ARRT radiography blueprint by content category and category weight. The questions are unique to the mock test—they cannot be found in the regular instructor or student bank.

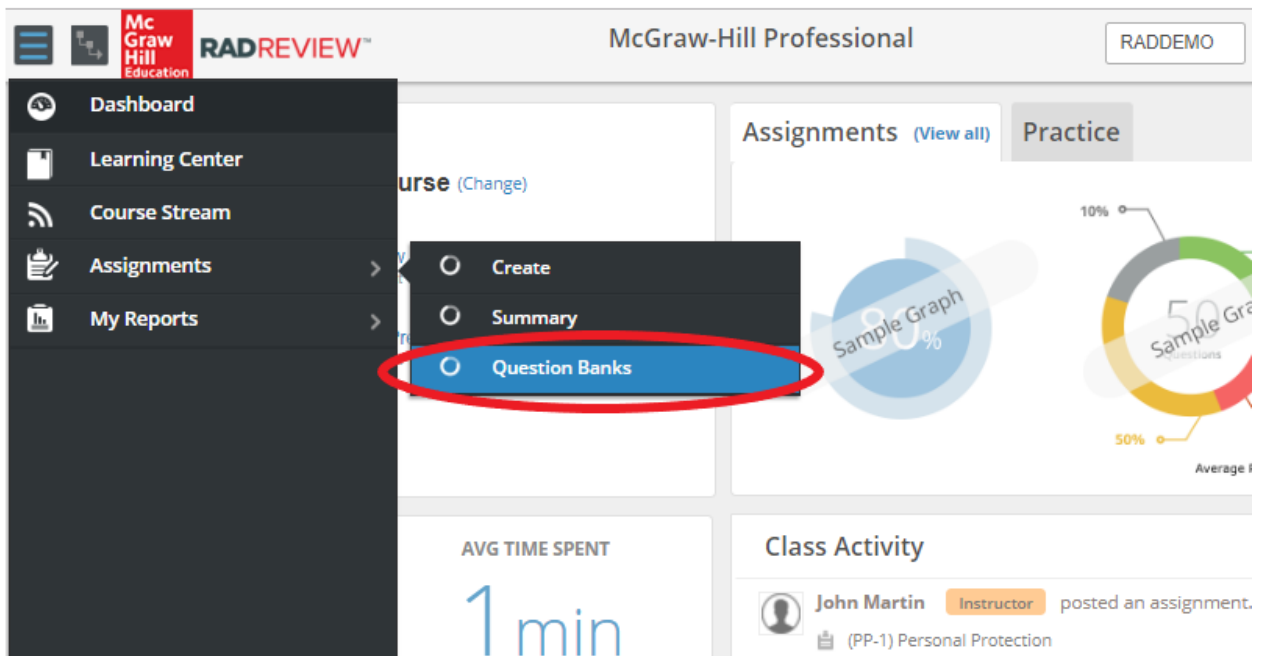

The mock test is ready for an instructor to assign at any time. Questions cannot be moved in or out of the mock test.

In addition to multiple choice, the mock test includes the following ARRT question formats:

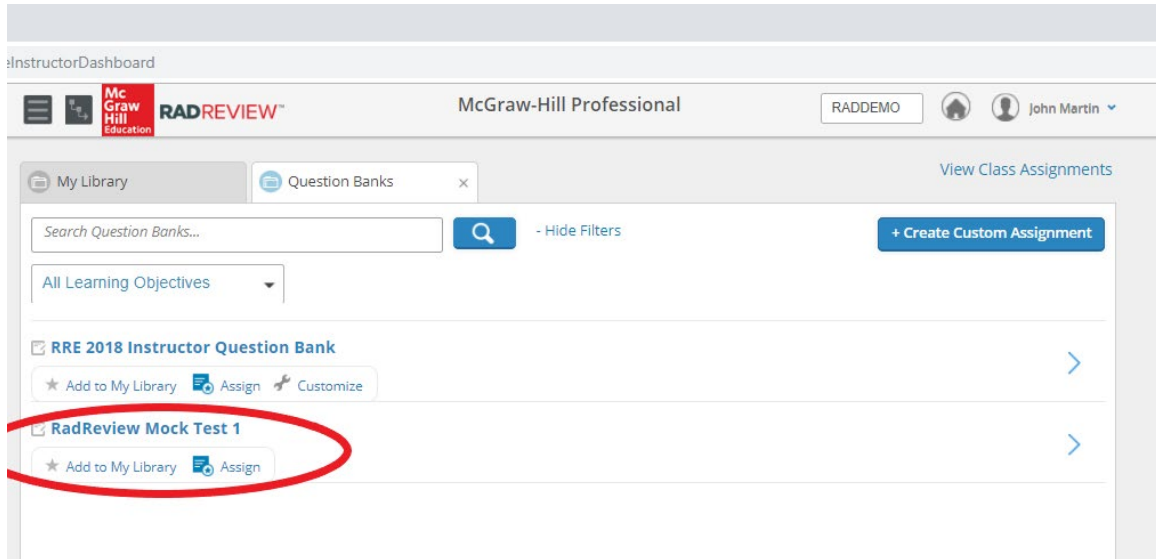

- A. Multiple select
- B. Combined response
- C. Re-ordering (drag-and-drop)
- D. 1 animation question

Steps to assign the mock test:

1. On the main navigation menu, go down to assignments and click “Question Banks”.

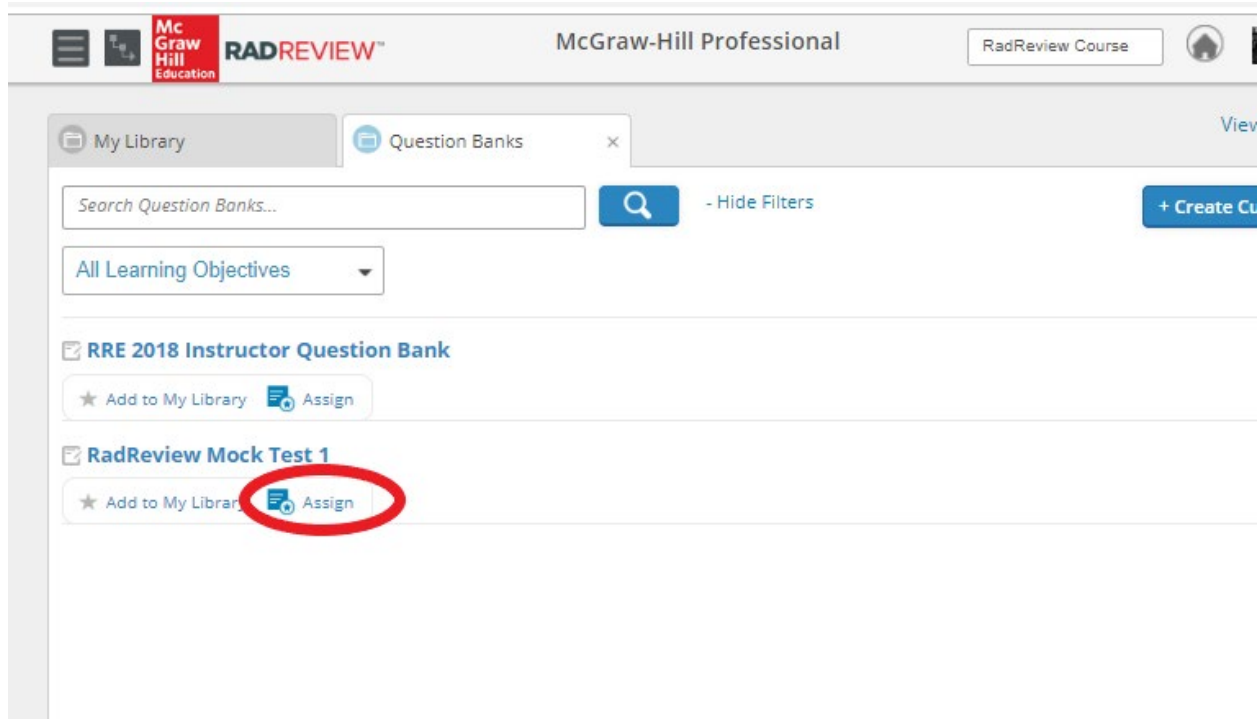

2. This will open a tab in assignments titled "Question Banks". The mock test is the second in the list on this page ("RadReview Mock Test 1").

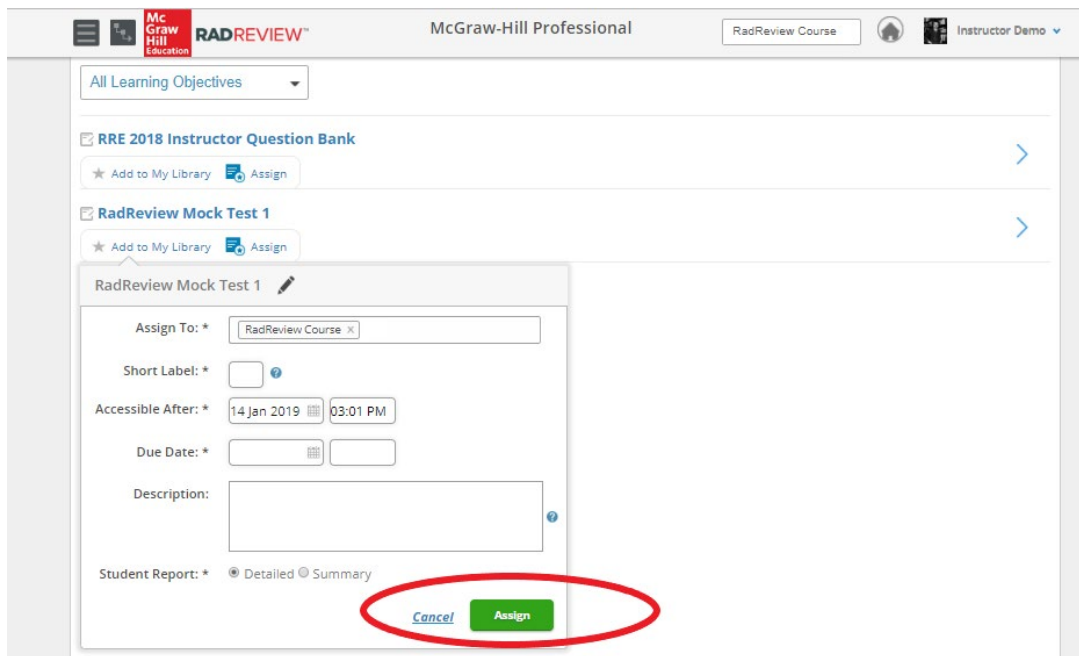

3. From here you can:

- A. Assign the mock test
 - o Click "Assign" below "RadReview Mock Test 1". A window will pop up to enter information for the assignment.

- Set up the mock test assignment as you would normally set up an assignment

- B. If you want to view the questions in the mock test, click on “RadReview Mock Test 1”. A separate tab will pop up where you can scroll through the questions (note: answers will be visible to instructors). To return to the question bank tab (previous tab where you can assign the mock test), close the mock test tab.
